Little Ouse, Trent, etc. The spawning time varies with roach, according to the weather and the temperature of the water, but generally speaking it begins about the middle of May and continues into June. After spawning, the roach repair to the scours, swift-flowing streams, and fresh water in order to cleanse themselves, and are frequently in rather poor condition for sport and the basket when June 16, the opening day of the freshwater angling season, arrives. July is a better month in which to make a start with roach fishing, but a good deal will depend on circumstances. In streamy, clear rivers with gravelly, sandy beds roach recover condition quicker than in slow running rivers with a muddy bottom and in still waters. Roach which have spawned in tidal rivers will often venture down stream until they come in contact with brackish water,...
